Response to Arguments

Applicant's arguments, see the pre-appeal conference request, filed 1/31/2007, with respect to the previous rejections of the claims, have been fully considered and are persuasive. The rejections of the claims have been withdrawn.

Allowable Subject Matter

Claims 1-33 are allowed.

The following is an examiner's statement of reasons for allowance: Lobo (US 7,054,658) claims a method of defining the relationship between frequency and amplitude of a pulse function as stated in the claims 1-34. The claimed invention does not claim the pulse function modulating a data stream for transmission in a telecommunication system in accordance with a predetermined modulation scheme to compensate for distortion by a component of the transmitter as claimed in the instant application. Ward et al (US 5,701,294) discloses a transmitter that shapes the transmission according to a modulation scheme and speech and channel coding (abstract and figure 3A). Cost functions are identified and selected according to the measured channel conditions (abstract). These selected cost functions will provide the input to the modulator 23 that modulates the data stream. Ward does not disclose the input to the modulator 23 is selected to compensate for distortion by a component of the transmitter as stated in claims 1-33.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
